

SAVE TIME & MONEY ON INSTALLING FLEET CHARGING

Through DLC's Fleet Charging Program, we'll help you save time and money on installing charging for your fleet so you can cash in on lower fuel and operational costs.

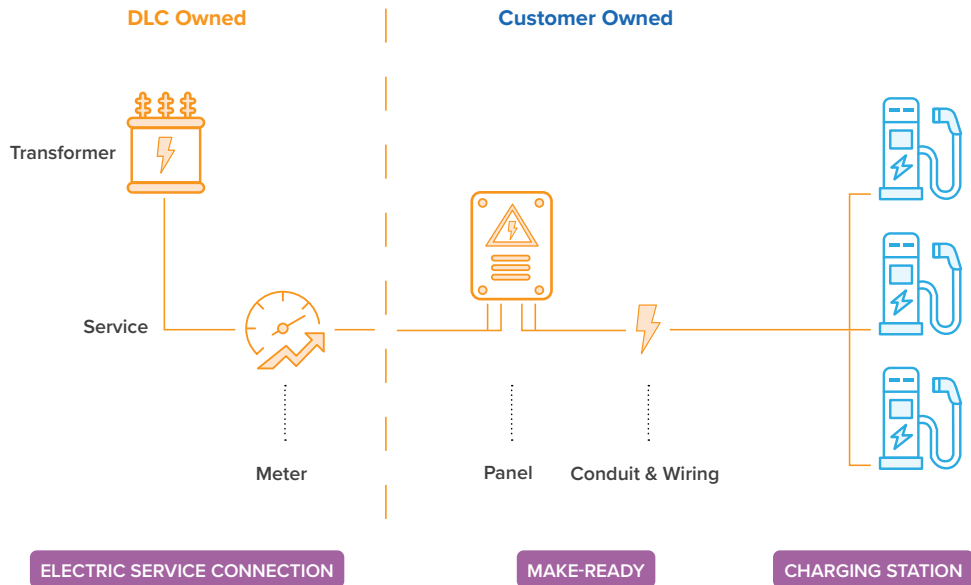

- ⚡ **Project Development:** We'll work closely with you to create a cost-effective EV charging project, ensuring your vehicles are always ready to go.
- ⚡ **Financial Incentives:** We'll substantially reduce your project costs and assist you with grants and incentives to help offset the remainder.
- ⚡ **Project Support:** We'll manage your project from start to finish, including installing all necessary electrical infrastructure from the power grid to the charging station.

For qualified projects, DLC will install and cover the cost of installing the electric service connection and make-ready, while participating customers install the charging stations.

For projects located in or serving disadvantaged communities, DLC may be able to provide a rebate on the charging station cost.

*DLC owns/maintains infrastructure for 10 years
